Flexibility Meets Customization

The Ishida Uni-8 is an excellent fit for stores looking for high-end features at a mid-range price.

Layout and Display

The Ishida Uni-8 price computing retail scale has a 10-inch LCD operator screen for clear visibility and flexibility. The operation screen can be customized for frequently used functions such as PLU presets, categories, top sellers and more for quicker employee access. Choose from bench, pole or hanging scale types to best fit the needs of your store. This scale's large memory stores high-quality images and videos, allowing you to show in-store promotions on the customer-facing display.

Multiple Label Types

The Uni-8 supports die-cut, continuous or linerless labels through media side-loading.

Connectivity and Communication

The Uni-8 has high-speed wired or wireless communication with gigabit Ethernet, making it possible to easily process large files. State-of-the-art technology within the scale allows for more compatibility and flexibility with external systems in your store such as Ishida's ScaleLink Pro 5 scale management software. Remote maintenance access is also available to help your system get up and running quickly.
